Chip - I don't know how to weave this into this letter, but here's the stormwater info I'm looking for. It seems like it is reasonable to make the request at this stage of the game, and my preference would be to be as specific as possible so there is no misunderstanding and the materials don't fall short. If you agree, would you please figure out how to incorporate this into the letter? I'm expecting that you and Kristine would refine the language and perhaps the request as you see appropriate.

Model runs evaluating the effects of stormwater solids on sediment.
- At least two scenarios, one in the lagoon and one in the mainstem.
- For at least one scenario, repeat the evaluation using the high end and low end contaminant concentration to evaluate the relative sensitivity (I don't remember the terminology they used for this)
- Model Total PCBs, bis-EHP, and one or two metals (you may be better positioned to recommend specific metals)

Give me a call if you want to discuss this. Thanks

Karen

Subject: Fw: Draft June 22 Meeting Agenda (with Rationale and Background Discussion)

FS Team

As discussed at our follow-up meeting to the LWG's technology screening presentation, here is a draft proposal for the FS Key Elements (June 22nd) meeting prepared by Parametrix. Please let us know if you have comments or suggestions. We will refine and send to the LWG for discussion and planning for the meeting.

thanks
Chip

Chip,

Attached is our fact sheet outlining information we believe is needed from LWG prior to the June 22 meeting, a meeting agenda with objectives, and also background information on the FS process requirements and data needs.

I left this in a neutral format since I expect you will be pulling it into an EPA-formatted document. I am also assuming, as we discussed at the TCT meeting, that this or the EPA-formatted version will be circulated through the FS team for review and discussion (and modification as needed) prior to forwarding to the LWG.

Feel free to call if you have any questions.

Brad
